# Key New Features

# Fiery Color Profiler

*A professional-grade calibration and profiling add-on integrated directly into Digital Factory 12*

- Powered by the same core engine behind **Fiery Edge™**
- Enables **custom ICC profile** creation using supported spectrophotometers
- Delivers **consistent, repeatable output** across printers and jobs
- Ideal for DTF, DTG, UV, and textile workflows where **color precision** matters
- Used by professionals to produce **production-ready profiles** tailored to real media and printers

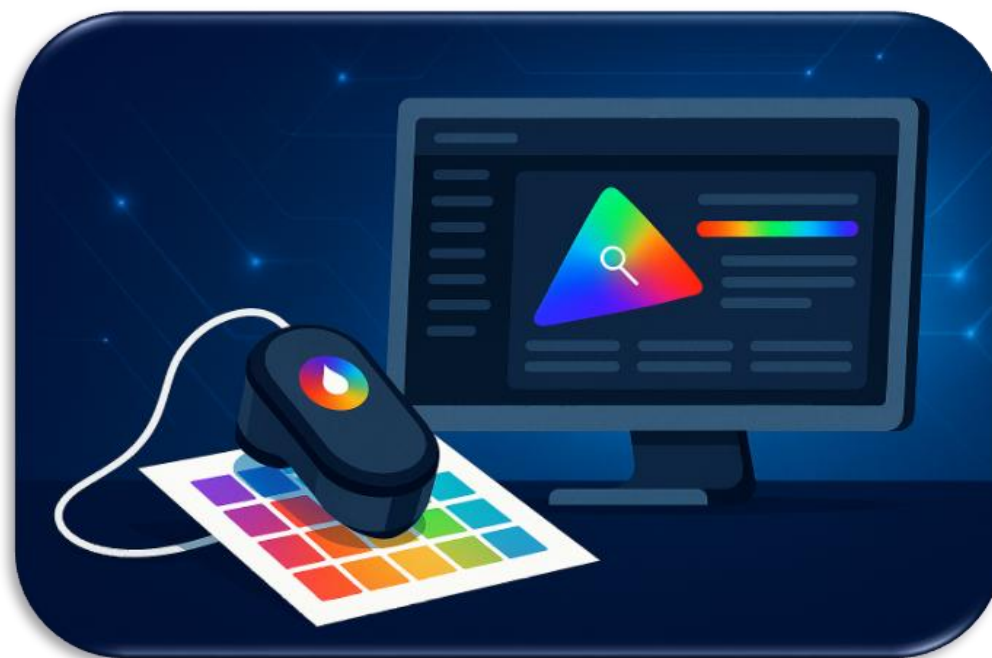

# How It Works - Integrated & Optimized

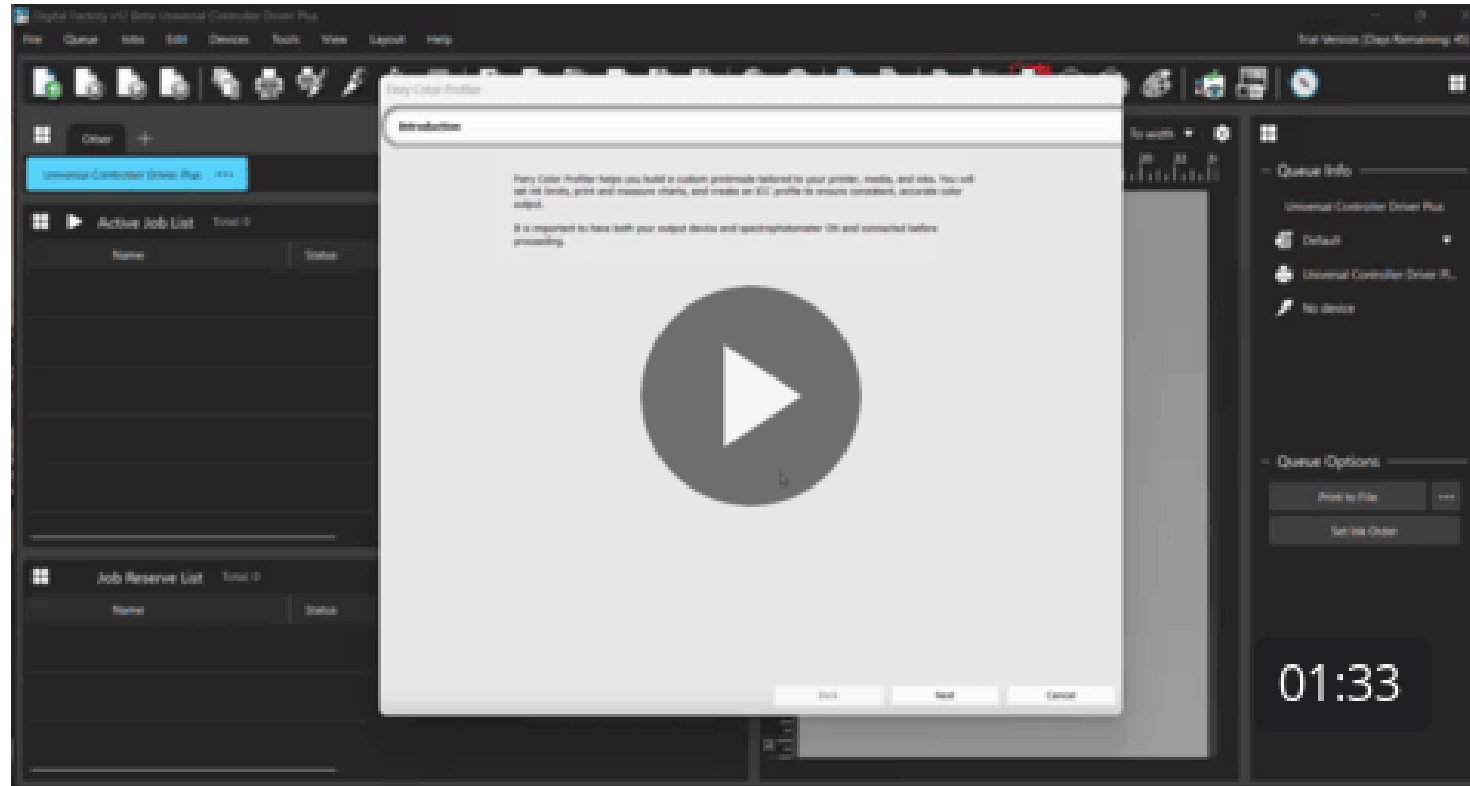

*Simple steps. Full control*

- Connects with devices like **i1Pro 2 / i1Pro 3**
- Easy step-by-step calibration and profiling wizard
- Profiles applied directly to queues
- Designed to maintain accuracy across reprints, media changes, and new hardware
- Available as a licensed add-on module

# Saturation Rendering Intent

*A new rendering intent designed specifically for DTF and textile workflows*

- Boosts vibrancy and color saturation across designs
- Enhances appearance of mid-tones and detailed areas
- Maintains natural skin tones and soft gradients
- Easily accessible via color management settings—no need for new profiles

**Before**

**After**

# Gang Sheet Builder

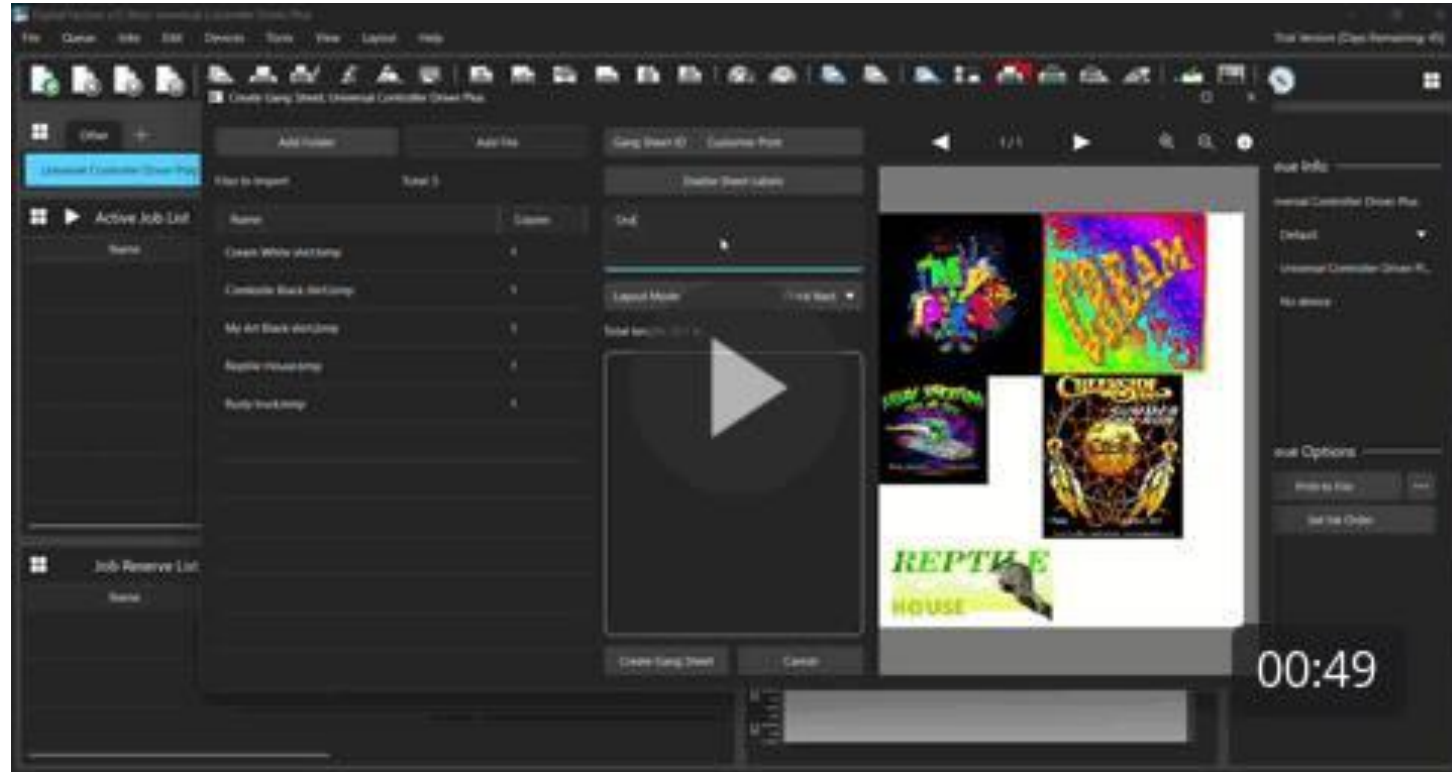

*An integrated visual gang sheet layout tool designed for DTF production*

- Preview and manage layout directly within the print queue
- Drag-and-drop interface with auto-alignment and spacing
- Auto-closes pages and groups jobs efficiently
- Replaces the need for paid third-party gangsheet software

# Markup Enhancements & Job Labeling

*Expanded tools for finishing, tracking, and visibility*

- New support for rotating individual markup elements to match job orientation or media feed
- Pull-cut registration marks added for better support with hybrid cutter setups
- Print length marks now display total material usage during job processing
- Job labels can now appear on multiple sides (top/bottom or left/right) for clearer identification

# Screen & Spot Color Tools

*Enhanced visual quality and brand color support*

- New screen selector allows halftone and dot gain control per queue
- Improves output smoothness for gradients, small text, and fine graphics
- Updated spot color management, UI enables easier color table selection

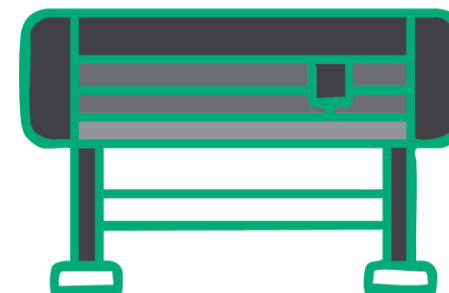

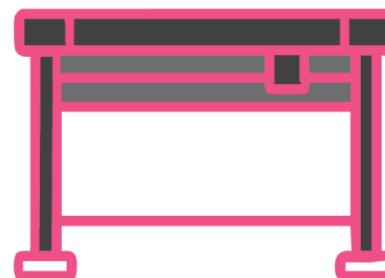

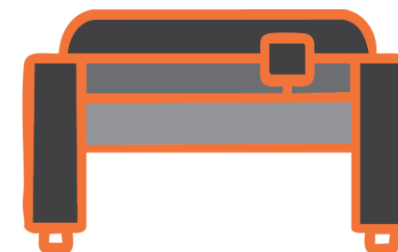

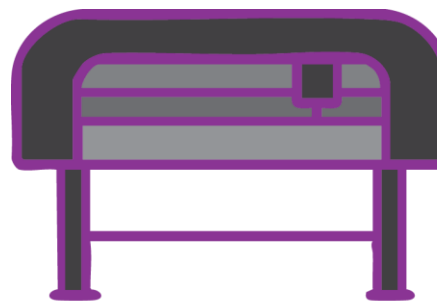

# New Printer Support

*Forward compatibility with next-generation printers*

- Version 12 introduces printer profiles created using Fiery Edge™ color technology, delivering superior default color quality right from installation
- Fiery Color Profiler remains the preferred tool for full customization and precision profiling, benefit from high-quality, ready-to-use profiles for faster setup and reliable output
- Designed to support evolving printer specifications and color workflows, ensuring long-term value and consistency across devices

# System Requirements

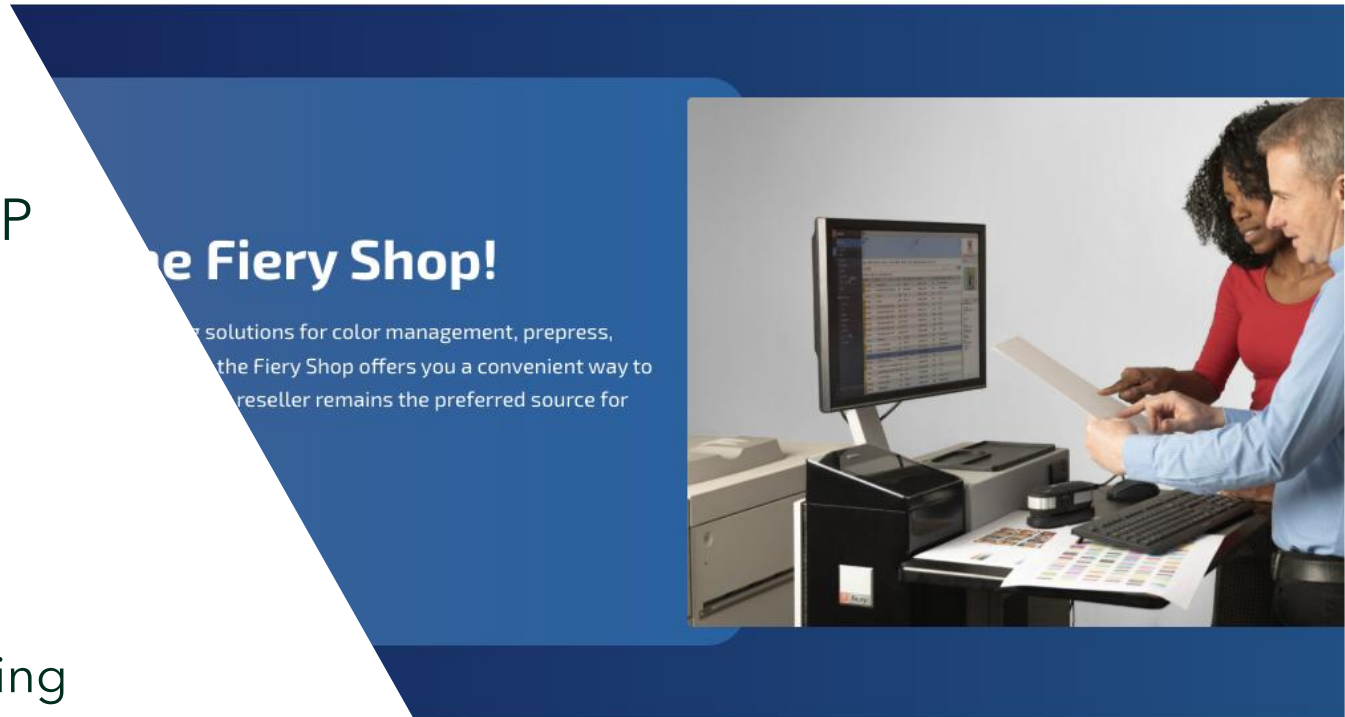

Recommended System Requirements	
Operating System	Windows 11
Memory	16GB RAM
Storage Space	SSD with 50GB of available space
CPU	Multicore Intel® or AMD processor, 3GHz or faster
Resolution	1080p

Minimum System Requirements	
Operating System	Windows 10
Memory	8GB RAM
Storage Space	HDD with 50gb of available space
CPU	Multicore Intel® or AMD processor, 1.7GHz or faster
Resolution	720p

# Pricing

- No change from previous versions
- Fiery Color Profiler add-on 640€ MSRP
- **PMC and PMC Lite:**
  - Upgrade to Fiery Color Profiler for FREE!
  - PMC Lite to Fiery Color Profiler for 275€
- **Upgrade pricing:**
  - 50% discount on Digital Factory 12 pricing for all editions
  - Promotion expires June 1st, 2026
  - Promotion excludes version 10 and older, Contact me for pricing as v10 is now and end of life product.
