

How to add ICC profiles to VerteLith (v5.0+)

Modified on: Tue, 18 Oct, 2022 at 1:52 PM

There are 3 ways to add profiles to VerteLith:

- by *downloading* from the Mutoh Club server.
- by manually *importing* .mpdf files from your HD.
- by manually copying .icc and .ssp file into VerteLith's folder structure

Downloading from the Mutoh Club Server

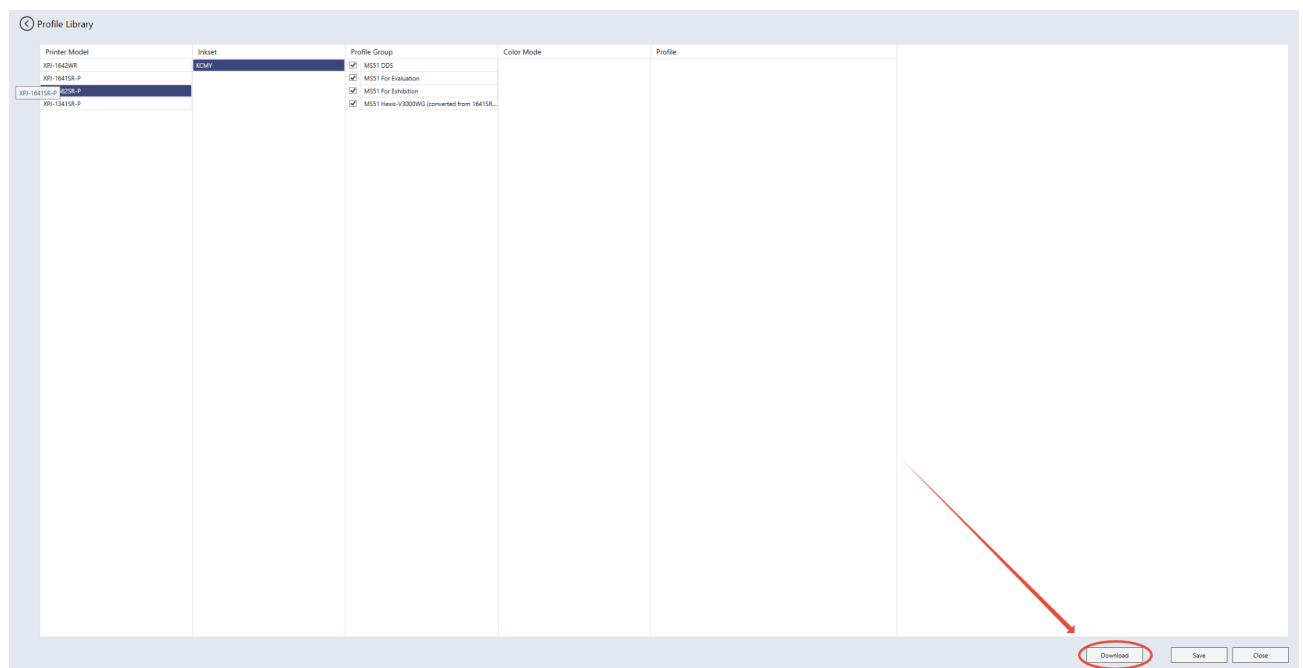

- Open the Profile Library from VerteLith's menu.

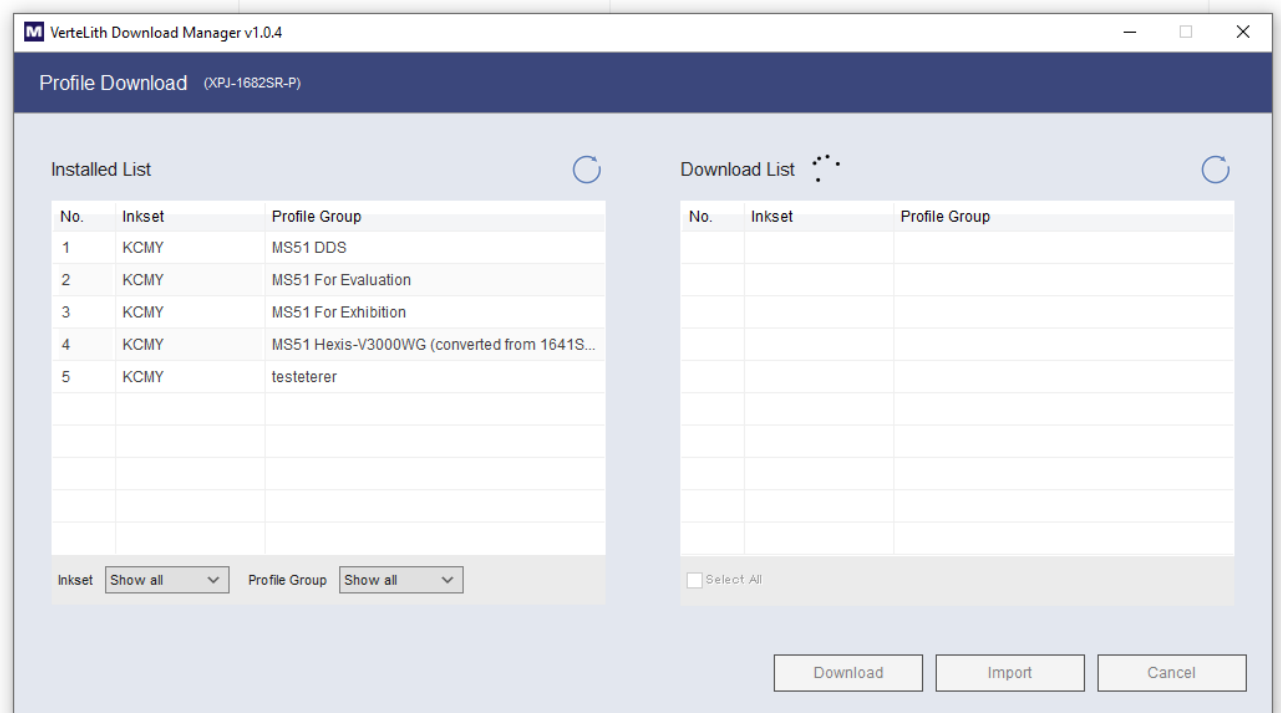

- In the Profile Library, in the lower right corner you'll find the DOWNLOAD button

A screenshot of the 'Profile Library' window in the VerteLith application. The window has a title bar with 'VerteLith' and a menu bar with 'File', 'Manage', 'Printer', 'View', and 'Help'. Below the menu bar is a header bar with a back arrow icon and the text 'Profile Library'. The main content area contains a table with four columns: 'Printer Model', 'Inkset', 'Profile Group', and a partially visible 'C' column. The table lists several printer models and their associated inksets and profile groups. The 'XPI-1682SR-P' model is highlighted in the 'Printer Model' column.

Printer Model	Inkset	Profile Group	C
XPI-1642WR	KCMY	<input checked="" type="checkbox"/> MS51 DDS	
XPI-1641SR-P		<input checked="" type="checkbox"/> MS51 For Evaluation	
XPI-1682SR-P		<input checked="" type="checkbox"/> MS51 For Exhibition	
XPI-1341SR-P		<input checked="" type="checkbox"/> MS51 Hexis-V3000WG (converted from 1641SR...	

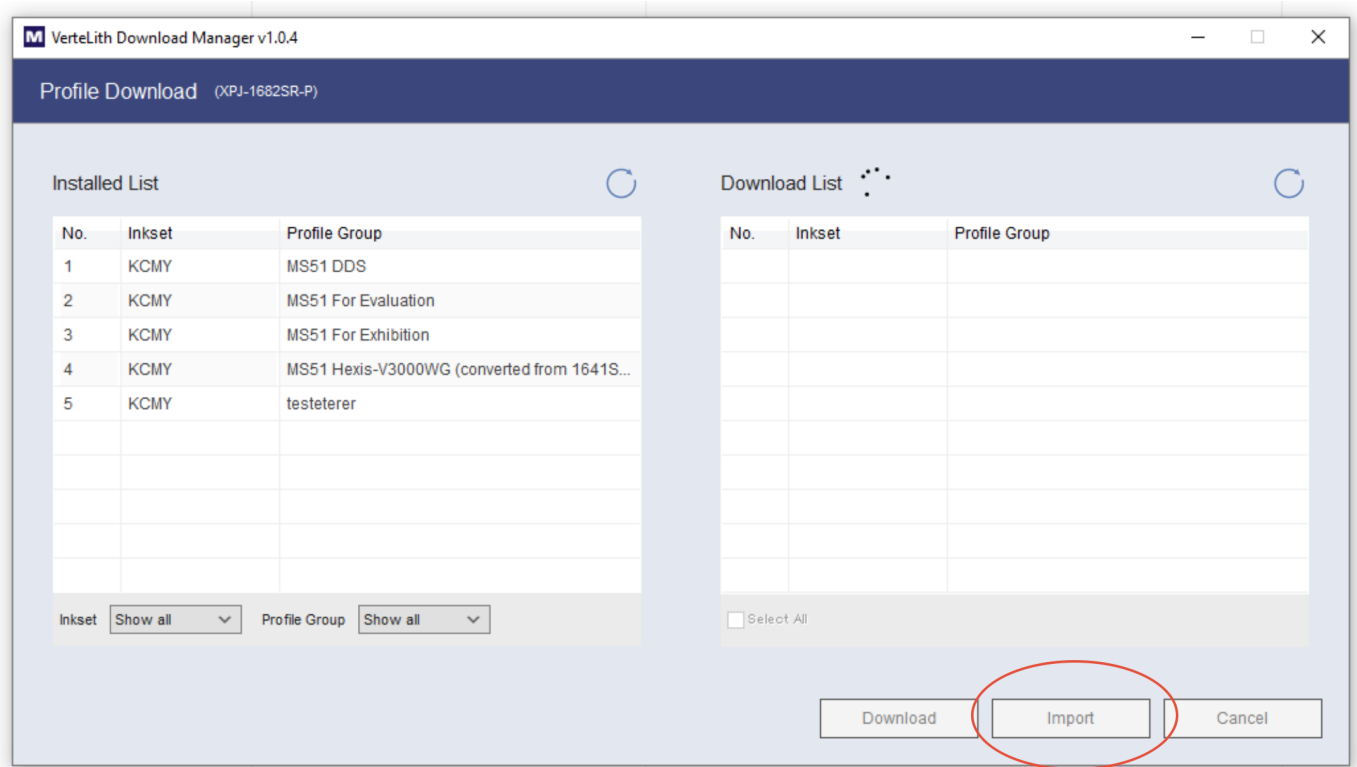

- The Download Manager will pop up and allows you to download profiles directly from the Mutoh Club into your driver.

Manually importing .mpdf files from your HD

The IMPORT button in the Download Manager allows to import .mpdf files from you HD.
Note that the Printer Profiler software can export .mpdf files.

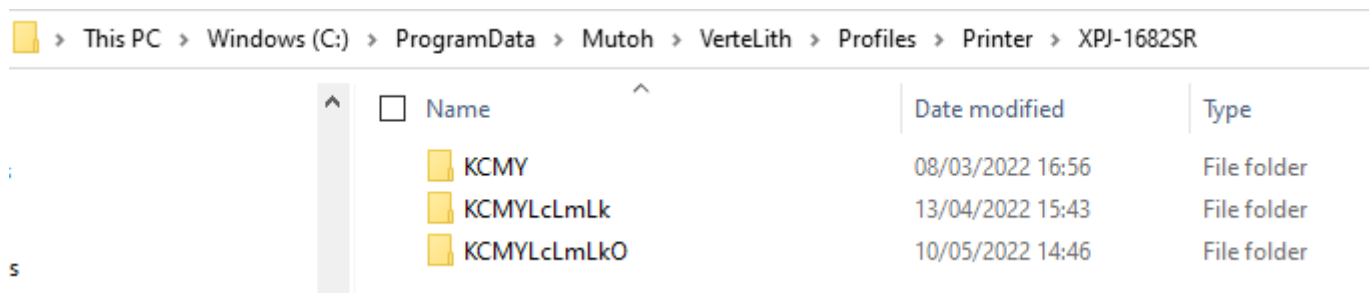

Manually copying .icc and .ssp files in VerteLith's folder structure

In the case you have received .icc and .ssp files from our Support Departments you can copy them directly in the folder structure.

For example:

C:\ProgramData\Mutoh\VerteLith\Profiles\Printer\XPJ-1682

- Make sure to copy your folder into the correct Ink Setup folder.
- Note that the ProgramData folder is hidden by default.
